

WILD BOAR STOP

The Problem

Wild boars go into plantations of corn, potatoes, hop, wine, as well as into meadows and fields and destroy or do severe damage to them.

The consequence are dramatic losses, destroyed plantations and high costs for electrical fences, repairing of damages and protection means.

The Goal

A product which

- ◆ protects the plants – no need to build fences or barriers;
- ◆ keeps the wild boars from intruding – without doing any damage to their health;
- ◆ does no harm to the environment (CFC-free) and is free of any poison;
- ◆ is safe and easy to handle.

The Solution

- A product based on nature-identical scents giving the wild boar the message that natural enemies are near – a product with a high efficiency and many ways of use.
- The application with aluminium foil and depot pads – a mixture of sound and scent – secures the repelling effect.
- Wild Boar Stop is simply to be applied – just spray it on the depot pads.
- Over-dosing is easy to be avoided, safe and easy handling is guaranteed.
- Even difficult places can be reached.

General Remarks

This special product was developed by HAGOPUR and is legally protected. Wild Boar Stop has already been tested successfully in many areas.

Wild Boar Stop – effective but harmless battle against wild boar bites!
